

Cyberstorage-Backed Data Protection

Built on Myota · Delivered by JNM Data Solutions.

Resilient, managed backup and recovery services powered by Veeam and Myota.io — protecting the data itself, not just the perimeter.

Ransom Immune

Zero breaches, exfiltrations, or ransomware losses since inception. Nothing readable to encrypt, leak, or ransom.

Instant Rewind

Not faster recovery — no recovery. Reconstruction from fragments is automatic. Any prior write, in seconds.

50% Less Storage

Storage infrastructure cost cut in half by design — fewer full copies to provision, license, and pay for.

CYBERSTORAGE LAYER · POWERED BY MYOTA

Immutable by Architecture, Not Policy

No credential — including root — can override it. A mathematical property of the fragment set, not a policy setting.

Ransom Immunity

What an attacker reaches is mathematically useless. Nothing to encrypt, leak, or hold for ransom.

50% Lower Storage Cost by Design

Fewer full copies to provision, secure, and license. Intrinsic safety makes the math work.

Air-Gapped Across Independent Providers

Encrypted, sharded, and spread across separate repositories. No single location holds a readable copy.

Instant Recovery to Any Prior Write

Reconstruction from fragments in seconds — not a restore workflow. Any point in time, no RPO gap.

Shard and Spread™ Architecture

Myota's patented approach fragments, encrypts, and distributes data so no usable copy ever exists in one place.

WHAT JNM DATA SOLUTIONS PROVIDES

Managed Veeam Orchestration

VSPC and Cloud Connect management across endpoint agents, hosted VBR servers, and customer-owned infrastructure.

Reporting & Operational Visibility

Customer-facing analytics, backup status reporting, and monitoring for backup reliability.

Support & Service Management

Day-to-day operations, implementation, troubleshooting, and recovery readiness guidance.

Veeam Licensing

Bring your own licenses or let JNM find the right fit — subscription or rental terms available.

Services Available

Managed backup — Cloud, on-prem, M365, Kubernetes.
Managed Disaster/Recovery replication — Cloud, on-prem, hosted.

THE RECOVERY STANDARD

Accelerating Recovery Readiness Through Intelligent Data Protection

The **3-2-1-1** standard: three copies, two media types, one off-site, **one immutable/air-gapped**.

With Myota underneath, the immutable and air-gapped copy is intrinsic to every write — not a setting to configure and test.

Myota pioneered cyberstorage — Shard and Spread™ protects the data itself, not just the perimeter.

JNM Data Solutions is a Veeam Accredited Service Partner delivering managed, tested, recovery-verified data protection.
